14:00– 17:00	<p style="text-align: center;">Workshop <i>Using "big data" web-based corpora for research and teaching</i> Plenary Speaker: Mark Davies (Brigham Young University) Moderator: Jong-Bok Kim (Kyung Hee University)</p>
-----------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

We will provide an overview of how to use the BYU corpora for research and teaching. These corpora include COCA (Corpus of Contemporary American English; 560 billion words, 1990-2017), COHA (Corpus of Historical American English; 400 million words, 1810-2009), GloWbE (Global Web-Based English; 1.9 billion words, 20 countries), and NOW (News on the Web; 5.7+ billion words, 2010 - yesterday!). Most of these corpora are 50-100 times as big as comparable corpora of English. We will also provide training on iWeb, a new 14 billion word corpus that will be released in April 2018, and which offers many features that are not available for the other BYU corpora, including many features that are extremely useful for language teaching. In all cases, we will focus on how the corpora can be best used to look at lexis, morphology, syntax, semantics, and discourse analysis, as well as studying variation by genre, historical period, and dialect.
